Subject: Pending Project Bolt - Cumberland Co; Pre-PACT NPDES Permitting Discussion w/SMEs

Greetings.

Meeting to discuss NPDES permitting aspects associated with the pending Fast Track "Project Bolt" data center development in Cumberland Co. Requisite local zoning amendments should be in place early May. To aid finalization of their design components, LIVIC Civil is interested to discuss/seek SME guidance on the following topics in advance of their project PACT submission:

- Use of a phased permitting approach with base NPDES permit and subsequent amendments
- Clarification on pre-development site characterization/infiltration testing requirements
- Discuss project permitting interface and submittal sequencing with construction activities that are underway on two properties contiguous to the Project Bolt site location: residential construction area; PPL switchyard construction w/anticipated ~3-acre laydown area added in future phase

LIVIC will provide a project overview and reference map(s) during the discussion. Please forward as necessary (CCCD et al).

Thanks!
-Ryan
